

Soft Material Trowel

This manual trowel is designed for applying and smoothing soft materials. It features a flat steel blade mounted on a dense foam pad and an ergonomic plastic handle.

Product Overview

Professional Soft Material Trowel

The Soft Material Trowel is a precision manual tool engineered for the seamless application and smoothing of various compounds. Designed for professional use, it features a durable rectangular steel blade mounted on a high-density foam pad to ensure consistent coverage. Its ergonomic handle allows for extended control, making it an essential instrument for achieving smooth, professional finishes across both small and large surface areas.

Technical Specifications

Blade Material	Steel
Blade Shape	Rectangular
Handle Material	Plastic
Pad Density	Dense Foam

Features

Design Benefits

- Ergonomic handle for comfortable grip
- Balanced design for large and small surfaces
- Durable construction for consistent application

Application Usage	Soft materials, Smoothing compounds, Surface finishing
