

Soft PVC Film Calendaring Line

This high-precision calendaring line is designed for producing soft PVC film. It features advanced control systems to ensure consistent film thickness and quality.

Product Overview

Industrial PVC Calendaring Solution

This high-precision calendaring line is engineered for the efficient production of transparent, semi-transparent, and high-filling soft PVC films. Designed for versatility, the system supports the creation of varied products including decorative wooden pattern papers, synthetic leather, and specialty materials. It features robust construction, advanced temperature control, and automated thickness measurement to ensure consistent high-quality output for demanding industrial applications.

Machine Type

Soft PVC Film Calendaring Line

Production Capabilities

Output Materials

Soft PVC Film, Rigid PVC Film, Semi-rigid PVC Film, Synthetic Leather, Decorative Wooden-pattern Paper

Technical Features

Integrated Systems

- Multi-roll calendaring stack
- Advanced temperature control units
- Automatic thickness measurement system
- Automated printing machine
- Integrated embossing machine

Operational Highlights

System Benefits

1 Automated

Control System

1 High Precision

Texture Customization
