

Soft PVC Film Calendering Line

This high-precision calendering line is designed for the production of soft PVC film. The system features multiple rollers for precise thickness control and surface finish.

Product Overview

High-Precision Calendaring System

This advanced calendaring line is engineered for the high-quality production of transparent, semi-transparent, and high-filling soft PVC films. Designed for versatile material processing, it supports the manufacturing of wood-pattern paper, Christmas decorative cloths, and synthetic leathers. The system ensures superior thickness control and surface finishing through integrated multi-roller technology and automated tension management.

Technical Features

Production Capabilities

- Transparent PVC film production
- Semi-transparent film manufacturing
- High-filling PVC soft plastic processing
- Wood-pattern paper production
- Synthetic leather manufacturing
- Christmas cloth production

Performance Metrics

1 High Precision

Thickness Control

1 Integrated

Automation Level

Engineering

Maintenance and Reliability

Robust Construction • Easy Maintenance • Upgrade Ready

Key Design Features

Multi-roller configuration, Advanced temperature control, Automatic tension control, Integrated edge trimming, Modular construction
