

Soil Compaction Rammer

This soil compaction rammer is designed for efficient soil compaction in construction and landscaping applications. It delivers high impact force for effective compaction of granular and mixed soils.

Product Overview

Professional Soil Compaction

This soil compaction rammer is a robust machine engineered for high-performance soil compaction in demanding construction and landscaping environments. Its compact design allows for superior maneuverability in confined spaces such as trenches and backfilling areas. Built for durability, it effectively processes granular and mixed soils to provide a stable foundation.

Performance Metrics

Performance Metrics

15 kN

Impact Force

110 N m

Ramming Energy

Technical Specifications

Plate Size	270x330mm
Forward Speed	12.5 km/h

Application Compatibility

Ideal Use Cases	Trench Compaction, Foundation Preparation, Backfilling, Landscaping
