

Soil Compactor

This plate compactor is a robust machine designed for soil compaction and asphalt preparation. It delivers high impact force for effective compaction across various surfaces and features a durable steel baseplate.

Overview

Professional Plate Compactor

This plate compactor is engineered for high-efficiency ground compaction and surface smoothing through vibration transmission. It is ideal for a wide range of professional applications including trench compaction, earthworks, road maintenance, landscaping, and driveway topping. With a design that emphasizes strong compacting force, excellent forward capability, and slope climbing ability, it provides reliable performance on soil, asphalt, and gravel.

Technical Specifications

Model ID	C120
Noise Level	101 dB

Applications

Primary Use Cases

- Trench compaction
- Earthworks
- Road maintenance
- Landscaping
- Brick paving
- Driveway topping

Compatible Surfaces	Soil, Asphalt, Gravel
---------------------	-----------------------

Performance Features

Key Performance Metrics

1 High Forward Capability	1 Easy Slope Climbing
