

Soil Stabilizer Reclaimer with Milling Head

This heavy machinery is designed for soil stabilization and land reclamation in construction applications. It features a milling head with durable blades for pulverizing and blending soil.

Product Overview

High-Performance Soil Stabilization

This specialized heavy machinery is engineered for efficient land preparation, soil reclamation, and road construction projects. Featuring a robust, articulated chassis and heavy-duty tires, it provides excellent traction and stability on uneven terrain. The front-mounted milling head is equipped with durable blades designed for precise soil pulverization and blending, ensuring optimal ground stabilization results.

Technical Specifications

Drive System

Hydrostatic Drive

Equipment Type

Soil Stabilizer / Reclaimer

Chassis Design

Articulated, Heavy-Duty Tires, Off-Road Capable

Performance Metrics

Milling Head Function

- Soil pulverization
- Soil blending
- Land reclamation
- Road construction preparation

Operator Safety & Control

Yes
