

Soil Tilling Machine

This robust machine is designed for tilling soil in gardens, farms, and cultivation areas. It features adjustable depth control and ergonomic handles for comfortable operation.

Product Overview

Professional Soil Tilling Machine

The WM500 Tilling Machine is a robust and efficient agricultural tool engineered for high-performance soil preparation in gardens and farming environments. It features a powerful engine and durable rotating blades designed to effectively break up, aerate, and turn soil for optimal planting conditions. With its adjustable depth control and ergonomic handling, this machine provides the versatility and comfort required for professional-grade agricultural projects.

Operational Features

User-Centric Design

- Robust frame construction for stability
- Durable tines for effective soil penetration
- Integrated transport wheels for diverse terrain
- Adjustable depth control for custom cultivation

Key Capabilities

Soil Aeration, Adjustable Tilling Depth, Ergonomic Controls, High Maneuverability

Application

Ideal For

Small-scale gardening • Commercial farming • Soil preparation • Agricultural projects
