

Solar Panel Carport System

This solar panel carport system provides shade for parked vehicles and renewable energy generation. The structure features a robust, elevated framework supporting an array of photovoltaic panels.

System Overview

Solar Panel Carport System

This solar panel carport system provides both shade for parked vehicles and renewable energy generation. The structure features a robust, elevated framework supporting an array of photovoltaic panels arranged in a grid pattern. It allows for the efficient use of parking space while contributing to sustainable energy solutions, making it ideal for commercial parking lots and residential complexes.

Technical Details

System Size

26 kWp
Power Capacity

Module Type

CS6P

Project Information

Installation Location

Carolina, USA

Completion Date

May 2009
