

Solar-Powered Advertising Display

This solar advertising screen automatically lights up at night and stores energy during the day. It features an independent power supply, eliminating the need for wiring and minimizing failures.

Product Overview

Sustainable Advertising Innovation

This advanced solar-powered advertising display utilizes high-efficiency amorphous silicon solar cells to provide a completely independent and wireless lighting solution. Designed for maximum versatility, the unit features EL light source technology for high brightness with minimal power consumption. Its modular design allows for convenient assembly and movement, making it an ideal eco-friendly solution for dynamic advertising needs.

Technical Specifications

Solar Cell Technology	Amorphous silicon
Lighting Technology	EL (Electroluminescent) light source

Features & Benefits

Key Advantages

- Automatic day/night operation
- Environmentally friendly, no pollution or noise
- Independent power supply with no wiring required
- Low failure rate and long service life
- Highly portable with strong maneuverability

Environmental Profile	Solar-Powered, Energy-Efficient, Wireless
