

Solar Water Heater with Evacuated Tube Collectors

This solar water heater uses evacuated tube collectors for efficient heating. It is designed for residential use, providing a sustainable and cost-effective hot water solution.

Product Overview

Sustainable Hot Water Solution

This solar water heater utilizes high-efficiency evacuated tube collectors to capture and convert solar radiation into thermal energy for domestic water heating. Designed for durability and performance, the system provides a sustainable, cost-effective alternative to traditional water heating methods. The unit features a dual-power design that ensures reliable operation, making it an ideal choice for residential environments seeking energy efficiency.

System Specifications

Collector Type	Evacuated Tube Collector
Power Configuration	Solar Energy, Dual Power

Performance Features

Best For
Residential Use • Energy Saving
