

Solar Water Heating System

This high-efficiency solar water heating system is suitable for both residential and commercial applications. Its features include evacuated tube collectors for optimal solar energy absorption and a durable frame construction for long-lasting performance.

Product Overview

High-Efficiency Solar Heating

This solar water heating system is engineered for both residential and commercial applications to maximize energy absorption. Featuring advanced evacuated tube collectors, the modular design ensures optimal performance and scalability for various installation needs. It is an ideal solution for businesses and homeowners looking to reduce overall energy consumption and decrease water heating costs.

Technical Specifications

Design Features

- Modular design for scalability
- Durable frame construction
- High-absorption evacuated tubes

Collector Type	Evacuated Tube Collectors
Primary Applications	Residential, Commercial
