Product Overview

High-Performance Solid Tire Solutions

This solid tire is specifically engineered for boom lifts, skid steer loaders, and material handlers operating in demanding construction environments. Built with high-quality natural rubber and high-tech adhesives, it ensures a firm fit and eliminates the risk of punctures and downtime. The robust construction and optimized tread patterns provide superior traction, stability, and a maintenance-free service life for heavy-duty applications.

Technical Specifications

Profile view of the 33X12-20 solid tire designed for maximum stability and puncture resistance.

Available Sizes	31x10-16, 33x12-20, 36x14-20
Material	High quality Natural rubber, no marking compound

Performance Features

The robust construction features circular cutouts for enhanced shock absorption and a smoother ride on rough terrain.

Constructed with a high-quality solid rubber compound to eliminate the risk of flats in challenging environments.

Key Benefits

- Excellent wear-resistance
- Superior climbing capability
- Enhanced steering dexterity
- High start torque
- Exceptional tread grip
- Good puncture resistance

Quality Standards

Above National Standard Shore A Hardness • High Tensile Strength (MPa)

Design & Application

Optimized tread pattern ensures superior traction for boom lifts and skid steer loaders.

Compatible Machinery

Boom Lifts, Skid Steer Loaders, Material Handlers

Tread Pattern Options

2

Manufacturing Details

Production Area

28000 sqm

Customization

Yes
