

Soy Milk Maker with Filter Basket

This soy milk maker efficiently blends ingredients and separates pulp with its integrated filter basket. It features a dispensing tap for convenient serving and a control panel for selecting various functions.

Product Overview

Professional Soy Milk Extraction

This high-capacity soy milk maker is designed for efficient production, featuring an integrated filter basket system that seamlessly separates pulp from liquid. The appliance is built with a durable stainless steel base for commercial-grade reliability and includes a convenient dispensing tap for smooth service. With its intuitive control panel and transparent blending container, it offers precise operation for consistent results in any food service environment.
