

# Spa and Pool Inline Electric Water Heater

Inline electric water heater designed for spa and pool applications. Features a robust thermoplastic housing, adjustable thermostat for precise temperature control, and integrated flow sensor for safe operation.

## Overview

### Efficient Thermal Management for Aquatic Systems

This inline electric water heater is engineered specifically for spa and pool environments, providing reliable temperature maintenance. Featuring a durable thermoplastic housing and an integrated flow sensor, it ensures both safety and longevity in demanding aquatic conditions. With precise, adjustable thermostat controls, this unit allows for optimal thermal management to keep water at your desired comfort level.

## Technical Specifications

### Power Output

**1.5 KW**

Power

### Phase

Single Phase

### Electrical Input

120/240 VAC 50/60 Hz

### Maximum Pressure

3 BAR

## Features

### Core Features

- Robust thermoplastic housing
- Adjustable thermostat for precise control
- Integrated flow sensor for operational safety
- Flow sensor reset capability

### Model Identifier

SOH-1500S
