

Speaker Frame with Perforated Design

Speaker frame designed for audio-video product accessories. It features a perforated pattern for acoustic transparency and ventilation.

Product Overview

Acoustic and Structural Performance

This speaker frame is engineered specifically for audio-video accessories, combining robust construction with a functional design. Featuring a distinct perforated pattern, it ensures optimal acoustic transparency while providing necessary ventilation for electronic components. Finished in a professional black coating, the frame includes pre-drilled mounting holes to facilitate secure and efficient installation across various speaker configurations.

Physical Properties

Material	Metal
Surface Finish	Black

Design Features

Key Features	Perforated Pattern, Acoustic Transparency, Ventilation Support, Mounting Holes
