

Specialty Busbar for Power Distribution

These specialty busbars are designed for efficient electrical power distribution. They feature robust construction with evenly spaced connectors, ensuring reliable performance in electrical panels and switchboards.

Product Overview

Innovative Power Distribution Solutions

This specialized busbar provides a modern alternative to traditional miniature circuit breaker (MCB) connection methods. Engineered for efficiency, it features a wider contact area that significantly reduces power consumption and minimizes temperature rise during operation. The design is fully customizable to meet diverse international electrical standards and specific regional requirements.

Technical Features

Performance Advantages

- Wider contact area for enhanced conductivity
- Low power consumption design
- Optimized for low temperature-rise
- Customizable configurations for global standards

Design and Compatibility

Terminal Configurations

Terminal Type	Application Use
Y-shaped terminals	Secure connection points
Flat/Rectangular terminals	Versatile wiring applications

Identification and Safety

Black insulation strips, Blue insulation strips, Durable insulating body
