

Spherical Plain Bearing for Industrial Machinery

This spherical plain bearing is precision-engineered for demanding industrial applications. Constructed from high-grade 42CrMo steel, the bearing provides exceptional load-bearing capacity and durability.

Product Overview

Industrial Grade Performance

This precision-engineered spherical plain bearing is designed for the most demanding industrial environments. Constructed from high-grade 42CrMo steel, it provides exceptional load-bearing capacity and long-term durability. Its hardened and polished spherical surface ensures smooth, efficient operation by minimizing friction and wear, making it an ideal choice for heavy machinery and construction equipment.

Material and Design

Material	42CrMo Steel
Surface Characteristics	Hardened, Polished, Low Friction

Manufacturing Identifiers

Identification Codes

- HXD1
- QS
- 2007/07
- 02128

Applications

Common Industries

Heavy Machinery • Construction Equipment • High-stress Environments
