

# Spherical Roller Bearing 22308CC/W33

With a spherically formed outer ring raceway, this roller bearing achieves self-alignment. The rolling elements make contact with the inner and outer ring raceways, enabling it to handle substantial radial loads in heavy machinery.

## Product Overview

### Spherical Roller Bearing 22308CC/W33

This spherical roller bearing is engineered for high-performance applications, featuring a robust construction designed to handle heavy radial and axial loads. Its optimized internal geometry ensures reliable operation and exceptional load-carrying capacity in demanding industrial environments. This component is suitable for a wide range of heavy-duty machinery and equipment requiring precision and durability.

## Product Details

Bearing Type	Spherical Roller Bearing
Model Number	22308CC/W33
Certifications	ISO 9001:2008
