

Spherical Roller Bearing for Coal Grinding Machines

This spherical roller bearing is designed for coal grinding machines and other heavy industrial applications. Its robust construction and high-quality materials ensure long-lasting performance and reliability under heavy loads.

Product Overview

High-Performance Spherical Roller Bearing

This spherical roller bearing is specifically engineered for heavy-duty applications such as coal grinding machines. Designed to withstand extreme loads and harsh operating conditions, it features a robust construction that ensures reliability in demanding industrial environments. The spherical design allows for effective misalignment compensation, which significantly reduces operational stress and extends the overall lifespan of the component.

Technical Specifications

Key Features

- Misalignment compensation
- Robust construction
- Engineered for harsh environments

Bearing Designation	241/560CAF3K30/HCC3W
Bearing Type	Spherical Roller Bearing
Suitable Applications	Coal Grinding Machines, Heavy Industrial, High Load Applications

Manufacturing Details

Origin	Italy
