

Spherical Roller Bearing MC60

This spherical roller bearing is designed for high load capacity and self-aligning capabilities. It features precision-ground rollers and raceways for smooth operation and reduced friction.

Product Overview

Spherical Roller Bearing MC60

The MC60 is a high-performance spherical roller bearing engineered for demanding industrial applications. Designed with precision-ground rollers and raceways, it ensures smooth operation and significantly reduced friction. Its robust construction provides high load capacity and reliable self-aligning capabilities, making it an ideal solution for heavy machinery subject to misalignment or shaft deflection.

Technical Specifications

Bearing Type	Spherical Roller Bearing
Key Features	High Load Capacity, Self-aligning, Precision-ground, Reduced Friction
Material Construction	High-quality steel

Applications

Recommended Applications

- Heavy machinery
- Industrial equipment
- Applications with misalignment
- Applications with shaft deflection

Performance

Operational Benefits

Smooth Operation • Extended Service Life • Low Maintenance
