

Spiral Welded Steel Pipe

This spiral welded steel pipe is manufactured using a spiral welding technique, ensuring structural integrity. It is suitable for fluid and gas transportation, as well as structural applications.

Product Overview

Spiral Welded Steel Pipe

These spiral welded steel pipes are engineered for high-performance applications, utilizing advanced welding techniques including Electric Resistance Welding (ERW) and Spiral Submerged Arc Welding (SSAW). Designed to meet rigorous industrial standards, these pipes offer robust durability and structural integrity for demanding infrastructure projects. The manufacturing process ensures precise dimensional accuracy and reliable performance under pressure.

Technical Specifications

Welding Methods	ERW, SSAW, SAW
-----------------	----------------

Compliance and Quality

Quality Compliance

ASME Boiler and Pressure Vessel Code • TSSA Accredited

Certification Details

- Certificate Number: 17,876
- Validity: March 11, 2022 to March 11, 2025
