

Split Body Metal Anchors for Material Fastening

These metal anchors feature a split-body design that expands upon installation for enhanced grip. Constructed from durable metal, they provide reliable holding power for various applications in construction and manufacturing.

Product Overview

High-Performance Split Body Anchors

These split body metal anchors are engineered for secure and reliable fastening across a diverse range of construction and manufacturing materials. Featuring a specialized split-body design, they expand upon installation to ensure maximum grip and stability. Their durable metal construction provides the strength required for demanding applications, making them an essential component for professional fastening tasks.

Technical Details

Design Type	Split-body expansion
Material	Durable metal
Primary Applications	Construction, Manufacturing, Material Fastening

Performance Features

Key Benefits

- Secure expansion mechanism
- High gripping strength
- Durable metallic construction
- Versatile material compatibility
