

Split Case Centrifugal Pump for Water Transfer

This split case pump is a robust centrifugal pump designed for high-volume water transfer. Its design allows easy maintenance without disturbing piping and features a double-suction impeller for balanced hydraulic loads and extended bearing life.

Overview

ESF Series Centrifugal Pump

The ESF series is a robust, high-efficiency split case centrifugal pump designed for high-volume water transfer applications. Engineered in accordance with UL448 safety standards, these pumps offer stable operation, low noise, and exceptional longevity. The horizontal split case design facilitates easy maintenance and inspection without the need to disturb existing piping, minimizing operational downtime.

Technical Features

Safety Compliance

UL448

Key Benefits

High Flow Rate, High Efficiency, Low Noise, Easy Maintenance, Stable Operation

Impeller Type

Double-suction impeller

Applications

Typical Applications

- Municipal water supply
- Fire protection systems
- HVAC systems
- Water treatment
- Irrigation
- Industrial processing
