

Split-Type Air Conditioning System

This split-type air conditioning system consists of an indoor vertical unit and an outdoor compressor unit. It is engineered for heat exchange and efficient air distribution.

Product Overview

Professional Split-Type Cooling Solution

This split-type air conditioning system is engineered for reliable temperature control in commercial or residential environments. Featuring a sleek indoor vertical unit for optimal air distribution and a robust outdoor compressor for high-efficiency heat exchange, it provides consistent cooling performance. Its integrated digital display ensures easy monitoring, making it a dependable choice for climate management.

System Configuration

Included Components

Indoor Vertical Unit, Outdoor Compressor Unit

Features

Air Flow Technology

- Multiple horizontal vents
- Efficient air distribution
- Digital control display
