

Spraying and Spreading Compressor

This compressor is designed for spraying machinery and spreading equipment. It features a horizontal tank, multiple pump heads, and a pressure regulation system.

Product Overview

Industrial Spraying and Spreading Compressor

This industrial-grade compressor is engineered specifically for high-demand spraying machinery and spreading equipment applications. Featuring a robust horizontal tank design and an integrated pressure regulation system, it ensures consistent flow for professional operations. The multiple pump head configuration provides the power necessary for efficient commercial performance in demanding environments.

Technical Specifications

System Configuration

- Horizontal tank design
- Multiple pump heads
- Pressure regulation system

Application

Spraying Machinery, Spreading Equipment, Industrial, Commercial
