

Spraying and Spreading Equipment

This equipment is designed for the efficient spraying of liquids and spreading of materials. It is suitable for agricultural and industrial applications.

Product Overview

Versatile Industrial Processing System

This advanced spraying and spreading equipment is designed for high-efficiency industrial applications, specifically focusing on biomass processing and chemical material handling. The system integrates specialized modules for biomass ash management and combustible gas utilization, making it an ideal solution for renewable energy and waste-to-energy facilities. With its robust engineering, it ensures reliable performance in complex material processing and thermal cracking operations.

Technical Capabilities

Integrated Modules

- Biomass ash processing unit
- Combustible gas handling system
- Biomass cracking and oil extraction unit

System Type

Industrial Scale • Integrated System

Industry Applications

Renewable Energy, Waste Processing, Biomass Conversion, Industrial Material Handling
