

Spraying Machinery Filter Element

This is a filter element designed for spraying machinery. It ensures clean fluid flow by capturing particulate matter.

Product Overview

High-Efficiency Spraying Filtration

This premium filter element is engineered specifically for spraying machinery and spreading equipment to ensure optimal fluid cleanliness. Featuring a robust composite frame with horizontal support ribs, it provides structural durability under operational pressure. The high-capacity filter media effectively captures particulate matter, protecting your spraying systems from contaminants and ensuring consistent, high-performance output.

Technical Details

Design Features

- Rectangular profile
- Horizontal support rib architecture
- Integrated circular mounting/fluid port

Component Category	Replacement Filter Element
Materials	Molded Plastic, Composite Frame, High-Performance Filter Media

Applications

Suitable Machinery

Spraying Systems • Spreading Equipment
