

# Spring Balancer Retractor

The spring balancer is a hand-operated tool designed for suspending tools and equipment. It utilizes a spring-loaded mechanism for effortless movement and positioning of objects.

## ADDITIONAL IMAGES

## Product Overview

### Industrial Ergonomic Tool Support

The Spring Balancer Retractor is a specialized hand-operated tool designed to assist in lifting and suspending heavy equipment. By utilizing an advanced spring-loaded mechanism, it effectively counterbalances loads, allowing for effortless movement and precise positioning during industrial assembly tasks. Its compact, flat profile is engineered to save workspace while providing a high lifting capacity of up to 400 kg.

## Key Metrics

### Maximum Capacity

**400 kg**

Load Capacity

## Technical Specifications

### Performance Benefits

- Reduces operator fatigue
- Protects internal components from dust
- Automated cable retraction
- Suitable for small workspaces

### Typical Weight Settings

22 kg • 30 kg • 70 kg • 80 kg

### Design Advantages

Ergonomic Support, Space-Saving Profile, Adjustable Tension, Durable Construction
