

Spring Lock Washers

Spring lock washers prevent nuts and bolts from loosening. The split ring of metal is bent into a wave shape, compressing when tightened to create tension.

Product Overview

Reliable Vibration Resistance

Spring lock washers are essential hardware components designed to prevent nuts and bolts from loosening under stress. Featuring a split-ring metal design bent into a wave shape, these washers compress during installation to create tension, effectively locking fasteners in place. They are the ideal solution for high-vibration environments where maintaining structural integrity is critical.

Technical Details

Design	Split ring
Primary Function	Anti-loosening / Vibration resistance
Shape	Wave-shaped split ring

Key Features

Best For	Vibration Environments, Movement Resistance, Fastener Security
