

Sprocket for Steering and Transmission Systems

This sprocket is designed for steering and transmission systems. It features durable construction with precisely machined teeth for reliable power transfer.

Product Overview

Precision Steering and Transmission Sprocket

This high-quality sprocket is specifically engineered for critical steering and transmission systems. Featuring precision-machined teeth, it ensures reliable and efficient power transfer even under demanding operational conditions. Its robust construction is designed for long-lasting performance and consistent, smooth operation in industrial applications.

Technical Specifications

Design Features	Threaded inner diameter, High-durability construction, Precision-machined teeth
Primary Application	Steering and Transmission Systems
