

Square Body Pneumatic Cylinder

This pneumatic cylinder features a square body design for simplified mounting and integration. It provides reliable linear motion for automation, robotics, and general machinery applications.

Product Overview

Compact Industrial Actuator

The EBA series square model mini cylinder is a compact and robust pneumatic actuator engineered for precision in industrial automation. Its distinct square body design facilitates seamless integration and mounting within restricted spaces. Built with high-quality, durable materials including a reinforced piston rod, it provides consistent linear motion for demanding robotics and general machinery applications.

Technical Specifications

Key Features

- Durable square body housing
- Hardened piston rod
- Compact form factor
- Versatile stroke and bore options

Design Type	Square Body Mini Cylinder
Applications	Automation, Robotics, General Machinery
