

ST80/116 Tower Crane

The ST80/116 tower crane is widely used in modern industrial and civil fields. It is suitable for urban high-rise building, bridge, port, electric power, water conservancy, shipyard, nuclear power plant and other large projects.

Overview

Professional Lifting Solution

The ST80/116 Tower Crane is a heavy-duty industrial machine engineered for maximum stability and durability in demanding environments. It provides extensive reach and lifting capacity, making it an ideal choice for urban high-rise, bridge, and infrastructure projects. With an advanced control system and modular construction, it ensures both precision operation and efficient site assembly.

Applications

Industry Applications

High-rise construction, Bridge construction, Port development, Electric power projects, Water conservancy, Shipyards, Nuclear power plants

Operational Features

Key Features

- Robust tower structure
- Extended horizontal jib reach
- Advanced precision control systems
- Modular design for rapid assembly
- High stability for heavy-duty lifting
