

Stabilizer Bar Link for Auto Suspension

This stabilizer bar link is a crucial component in a vehicle's suspension system, connecting the stabilizer bar to the suspension. It features durable construction with a metal rod and rubber bushings, ensuring smooth and reliable performance.

Product Overview

Stabilizer Bar Link for Enhanced Stability

This stabilizer bar link is a critical suspension component designed to connect the anti-roll bar to the vehicle's suspension system. By effectively minimizing body roll during cornering, it plays a vital role in maintaining vehicle handling and driver safety. Its robust construction, featuring a durable metal rod and high-quality rubber bushings, ensures long-lasting performance and smooth operation under various driving conditions.

Technical Specifications

Installation Features

- Threaded ends
- Includes secure attachment nuts

Construction Materials

Metal Rod, Rubber Bushings

Performance

System Compatibility

Suspension System • Anti-Roll Bar System

Primary Function

Reduces vehicle body roll during cornering
