

Stacker Reclaimer for Material Handling

This stacker reclaimer is designed for heavy material handling in industrial settings. It features a robust steel frame, multiple support columns, and wheeled carriages for rail-guided movement, integrating with larger conveying systems.

Product Overview

Industrial Stacker Reclaimer

This stacker reclaimer is engineered for high-performance bulk material handling in demanding industrial environments. Featuring a robust steel frame construction and rail-guided wheeled carriages, it offers superior structural integrity and precision for integrated conveying systems. Designed for large-scale storage and material processing, this machinery ensures reliable operation and operational efficiency in heavy-duty applications.

Technical Specifications

Primary Applications

- Bulk material handling
- Material storage operations
- Conveying system integration

Surface Finish

Industrial blue-painted

Construction

Robust steel frame fabrication

Movement Mechanism

Rail-guided, Wheeled carriages
