

Stainless Steel Blind Flange

This blind flange is made from high-grade stainless steel. It is used to close off the end of a pipe or nozzle in various industrial applications.

Product Overview

Industrial Stainless Steel Blind Flange

The Stainless Steel Blind Flange is a high-performance solution designed to securely close off the end of pipes or nozzles. Engineered for maximum durability, this component provides exceptional corrosion resistance and a leak-proof seal in demanding industrial environments. With its robust raised face design and precise bolt hole alignment, it offers a reliable and secure connection for critical piping systems.

Technical Specifications

Material Grade

High-Grade Stainless Steel

Key Design Features

- Raised face design for improved sealing
- Corrosion-resistant construction
- Precision-drilled bolt holes
- Heavy-duty industrial build

Suitable Applications

Industrial Piping, Pressure Systems, Fluid Control, Pipe End Termination
