

Stainless Steel Blind Flange

This stainless steel blind flange is designed with precision-drilled bolt holes for secure connections in piping systems. Its construction ensures durability and corrosion resistance, making it suitable for demanding industrial applications.

Product Overview

Industrial Grade Blind Flange

This stainless steel blind flange is engineered for high-performance piping systems, providing a secure and leak-proof seal. Featuring a raised face design and precision-machined bolt holes, it ensures consistent reliability in demanding industrial environments. The high-quality stainless steel construction offers superior corrosion resistance and long-term durability for critical infrastructure applications.

Technical Details

Surface Characteristics

- Smooth surface finish
- Concentric tooling marks on raised face

Material Composition	Stainless Steel
Design Type	Raised Face
Key Attributes	Corrosion Resistant, Precision Machined, Industrial Grade, Leak-Proof
