

Stainless Steel Bottle 3D Printer

High-precision 3D printer designed for decorating stainless steel bottles and flasks with up to 6 colors. It supports a wide range of bottle sizes and shapes and features automated loading and unloading.

Overview

High-Precision Bottle Decoration

This advanced 3D printing machine is specifically engineered for the high-quality decoration of stainless steel bottles and flasks. It supports multi-color printing capabilities, enabling businesses to produce custom branding and personalized designs with exceptional detail. Built for efficiency, the system includes automated loading and unloading features to streamline high-volume production cycles.

Technical Capabilities

Printing Colors	6 colors
Ink Technology	UV-Curable, High-Adhesion, Scratch-Resistant

Production Features

Automation

- Automated loading mechanism
- Automated unloading mechanism
- User-friendly interface
