

Stainless Steel Centrifugal Pump

Close-coupled, stainless steel centrifugal pumps are engineered for diverse applications. The pump features a stainless steel body and impeller, coupled with a high-efficiency electric motor.

Overview

High-Efficiency Stainless Steel Centrifugal Pump

This close-coupled centrifugal pump is engineered with high-grade stainless steel for both the pump body and impeller, ensuring exceptional corrosion resistance and durability. Designed for versatility, it efficiently handles clean or slightly contaminated fluids across industrial, agricultural, and domestic applications. Its robust construction and high-efficiency electric motor provide reliable performance, while the design prioritizes ease of maintenance for long-term operational success.

Technical Specifications

Fluid Compatibility

Clean Fluids • Slightly Contaminated Fluids

Construction Material

Stainless Steel Pump Body, Stainless Steel Impeller

Pump Configuration

Close-coupled centrifugal

Application Areas

Suitable Sectors

- Industrial Processing
- Agricultural Irrigation
- Domestic Water Systems

Performance Features

Key Benefits

- Corrosion resistance
- Reliable performance
- Ease of maintenance
- High-efficiency motor
