

Stainless Steel Centrifugal Pump for Fluid Transfer

This centrifugal pump is constructed from stainless steel for durability and resistance to corrosion. It is designed for efficient water transfer and boosting in irrigation, water supply, and industrial applications.

Product Overview

High-Performance Centrifugal Pump

This stainless steel centrifugal pump is engineered for efficient fluid transfer and pressure boosting. Built with durable stainless steel, it offers excellent corrosion resistance and ensures a long operational life in demanding environments. It is an ideal solution for diverse applications, including industrial processes, irrigation, and municipal water supply systems.

Technical Specifications

Material Composition	Stainless Steel
Available Models	SCP158, SCP200, SCP300

Applications

Common Use Cases

- Water Supply
- Agricultural Irrigation
- Industrial Fluid Transfer
- Pressure Boosting Systems

Product Features

Feature Highlights

Corrosion Resistant • High Performance • Durable Construction
