Overview

Industrial Filtration Solution

This stainless steel filtration tank is engineered for high-efficiency purification of water, effectively removing impurities, odors, and mineral ions like Mg^{2+} and Ca^{2+} . Designed for seamless integration with Reverse Osmosis (RO) systems, it is an essential component for producing food-grade pure water. It is ideal for the production of bottled water, wine, juice, and various food processing applications.

Technical Specifications

Material	High-grade Stainless Steel
Capacity Range	1T to 50T
Suitable Applications	Bottled Water, Wine Production, Juice Processing, Food Production, RO Systems

Design Features

Design Features

3 count

Support Legs

Construction Details

- Cylindrical body
- Conical bottom
- Domed top
- Integrated pressure gauges
- Multiple valves and piping for fluid handling
