

Stainless Steel Flange

This is a stainless steel flange. It is precision machined for optimal sealing and durability.

Product Overview

Industrial Stainless Steel Flange

This high-quality stainless steel flange is designed for secure, leak-proof connections in critical piping systems. It features a precision-machined raised face and a standard four-bolt hole configuration to ensure reliable mechanical integrity under pressure. Built for durability and performance, this component is an essential solution for industrial fluid handling applications requiring corrosion resistance and long service life.

Technical Specifications

Connection Type	Threaded
Face Type	Raised Face
Bolt Hole Count	4
Key Features	Corrosion Resistant, Precision Machined, High Durability
