

Stainless Steel Flanged Ball Valve (API)

This stainless steel ball valve is suitable for use in oil fields, the chemical industry, and coal mining operations. It is also applicable for environmental protection systems.

Product Overview

Industrial Stainless Steel Ball Valve

This flanged ball valve is engineered to meet API standards, ensuring high performance in demanding industrial environments. Constructed from high-grade CF8/CF8M stainless steel, it provides exceptional corrosion resistance and durability for both liquid and gas applications. The robust flanged design allows for secure installation and reliable flow control in critical process piping systems.

Technical Specifications

Material	CF8, CF8M, Stainless Steel
Design Standard	API
Connection Type	Flanged
Nominal Size	4 inch
Pressure Rating	150 LB

Applications

Suitable Media

- Liquids
- Gases
