

Stainless Steel Flanged Gate Valve (API Standard)

This stainless steel gate valve is designed for industrial applications requiring reliable shutoff. Featuring a flanged connection conforming to API standards, this valve ensures secure and leak-proof operation.

Product Overview

Industrial Stainless Steel Gate Valve

This high-quality stainless steel gate valve is engineered for demanding industrial applications requiring reliable shutoff and flow control. Featuring a flanged connection that conforms to API standards, the design ensures a secure, leak-proof seal under various operating conditions. Constructed from durable materials, it offers exceptional corrosion resistance, making it an ideal choice for diverse fluid management systems.

Technical Specifications

Pressure Rating

150 lb

Pressure Class

Material Grade	CF8, CF8M
Connection Type	Flanged
Design Standard	API

Compliance and Quality

Certifications & Standards

API Standard Compliant • Corrosion Resistant
