

Stainless Steel Food and Beverage Processing Tanks

These stainless steel industrial tanks are suitable for food, beverage, and cereal processing. The large-capacity tanks are designed for efficient storage and processing of various liquids and granular materials.

Overview

Industrial Processing Solution

These stainless steel industrial tanks are engineered for the demanding requirements of food, beverage, and cereal processing facilities. Built from high-grade stainless steel, they provide exceptional hygiene standards and long-term durability for large-scale operations. The design incorporates conical bottoms to facilitate efficient discharge of contents, supported by a robust steel frame for maximum stability in industrial environments.

Technical Specifications

Material	High-grade stainless steel
Design Features	Conical bottom, Robust steel frame, Large-capacity storage

Applications

Suitable Industries

- Breweries
- Wineries
- Food processing plants
- Cereal processing

Handling Capabilities

Liquids • Granular materials
