

Stainless Steel Full Welded Ball Valve

This full welded ball valve is constructed from stainless steel. The valve is operated by a hand wheel, allowing for manual control of flow.

Product Overview

Industrial Stainless Steel Ball Valve

This full welded ball valve is engineered for demanding industrial environments where structural integrity and leak prevention are critical. Featuring a robust stainless steel construction and a manual hand-wheel operation, it provides reliable flow control under high-pressure and high-temperature conditions. Its design ensures a smooth internal bore for minimal flow restriction and long-term durability in heavy-duty applications.

Logistics & Supply

Minimum Order Quantity	1 Piece
Annual Productivity	8000 Pieces
Lead Time	30 Days
Packaging	Wooden case
