

Stainless Steel Globe Valve for Industrial Flow Regulation

This shutoff valve is constructed from durable stainless steel, typically 301, 304, or 316. It is widely used in chemical processing, shipbuilding, medicine, food production, and other industries.

Product Overview

Industrial Flow Regulation

This stainless steel globe valve is engineered for precise flow control in demanding industrial environments. Available in manual, pneumatic, and electric operation modes, it offers versatile integration options for complex pipeline systems. Constructed from high-grade stainless steel, it is designed for reliability in the chemical, shipbuilding, medical, and food processing industries.

Technical Details

Available Operation Types

- Manual
- Pneumatic
- Electric

Material Grades

301, 304, 316

Certifications

Certifications

TUV • CE • TS

Application

Target Industries

- Chemical Processing
- Shipbuilding
- Medical Equipment
- Food Machinery
