

Stainless Steel Horizontal Centrifugal Pump

This horizontal single-stage centrifugal pump is made from stainless steel. It is designed for efficient fluid transfer in various industrial applications.

Product Overview

Industrial Fluid Transfer Solution

This stainless steel horizontal single-stage centrifugal pump is engineered for high-performance fluid transfer across diverse industrial environments. Constructed from durable, corrosion-resistant materials, it ensures longevity even when handling clean or slightly contaminated fluids. The design integrates a robust motor with a precision-engineered impeller to deliver reliable, efficient operation and simplified maintenance for professional users.

Design and Construction

Material Composition	Stainless Steel
Configuration	Horizontal single-stage

Performance Features

Key Operational Benefits

- Corrosion-resistant construction
- Robust motor design
- Precision-engineered impeller
- Easy maintenance

Compatible Fluids	Clean fluids, Slightly contaminated fluids
-------------------	--
