

Stainless Steel Pharmaceutical Filter Housing

This stainless steel filter housing is designed for pharmaceutical applications. Constructed from high-quality stainless steel, this filter housing ensures durability and corrosion resistance.

Product Overview

High-Performance Filtration Solution

This stainless steel filter housing is engineered specifically for demanding pharmaceutical applications, ensuring optimal purity and process reliability. Constructed from high-quality stainless steel, the unit offers exceptional durability and corrosion resistance, making it suitable for rigorous daily use. Its design includes integrated monitoring tools and robust support structures, allowing for seamless integration into existing pharmaceutical, food and beverage, or chemical processing lines.

Technical Specifications

Integrated Features

- Pressure gauge for internal monitoring
- Inlet and outlet ports
- Robust support structure

Material	High-quality stainless steel
-----------------	------------------------------

Applications & Usage

Key Benefits

Corrosion Resistant • Easy Integration • Durable Construction

Suitable Industries	Pharmaceutical, Food and Beverage, Chemical
----------------------------	---
