

Stainless Steel Pipe Flange

This stainless steel flange is designed for connecting pipes and valves in industrial applications. It features a raised face, a central bore, and bolt holes for secure, leak-proof seals.

Product Overview

Industrial Stainless Steel Flange

This high-quality stainless steel flange is engineered for secure and leak-proof connections in demanding industrial piping systems. Featuring a raised face design, it ensures optimal sealing performance when connecting pipes, valves, or other essential equipment. Its robust stainless steel construction provides excellent corrosion resistance, making it an ideal choice for long-term durability in various industrial applications.

Technical Specifications

Flange Design	Raised Face
Material Composition	Stainless Steel
Bolt Hole Quantity	4
Key Features	Corrosion Resistant, Leak-proof Seal, Industrial Grade, Raised Face
