

Stainless Steel Pump Cover

This stainless steel pump cover is designed for industrial or commercial pumping applications. It protects the internal components of the pump and ensures efficient operation with its durable, corrosion-resistant construction and inlet/outlet ports.

Product Overview

Industrial Pump Protection

This stainless steel pump cover is engineered for industrial and commercial pumping applications where durability is paramount. Constructed from high-grade stainless steel, the unit provides robust protection for internal pump components while resisting corrosion and wear. Its compact design includes dedicated inlet and outlet ports, ensuring efficient fluid handling across a variety of pumping systems.

Technical Specifications

Connection Type

- Inlet port
- Outlet port

Material Composition

Stainless Steel

Key Design Features

Corrosion Resistant, Wear Resistant, Compact Design
